Software architect | researcher | engineer

# ArchAIitecture Research Collaborative

- Focusing on human/machine teaming and trust
- Diverse thought leaders
- Merging scholars and industry
- Data at scale
- Not-for-profit

# Quick Retrospective

- January 2023 - ChatGPT users hits 100M
- Chronic FOMO
- 2024 - Publishing surges
- Peer-reviewed research lags

Don't get  
swept away  
by the hype

# AI in SwEngineering... where are we now?

EXPECTATIONS

2 - 5 years to reach productivity plateau

As of August 2024

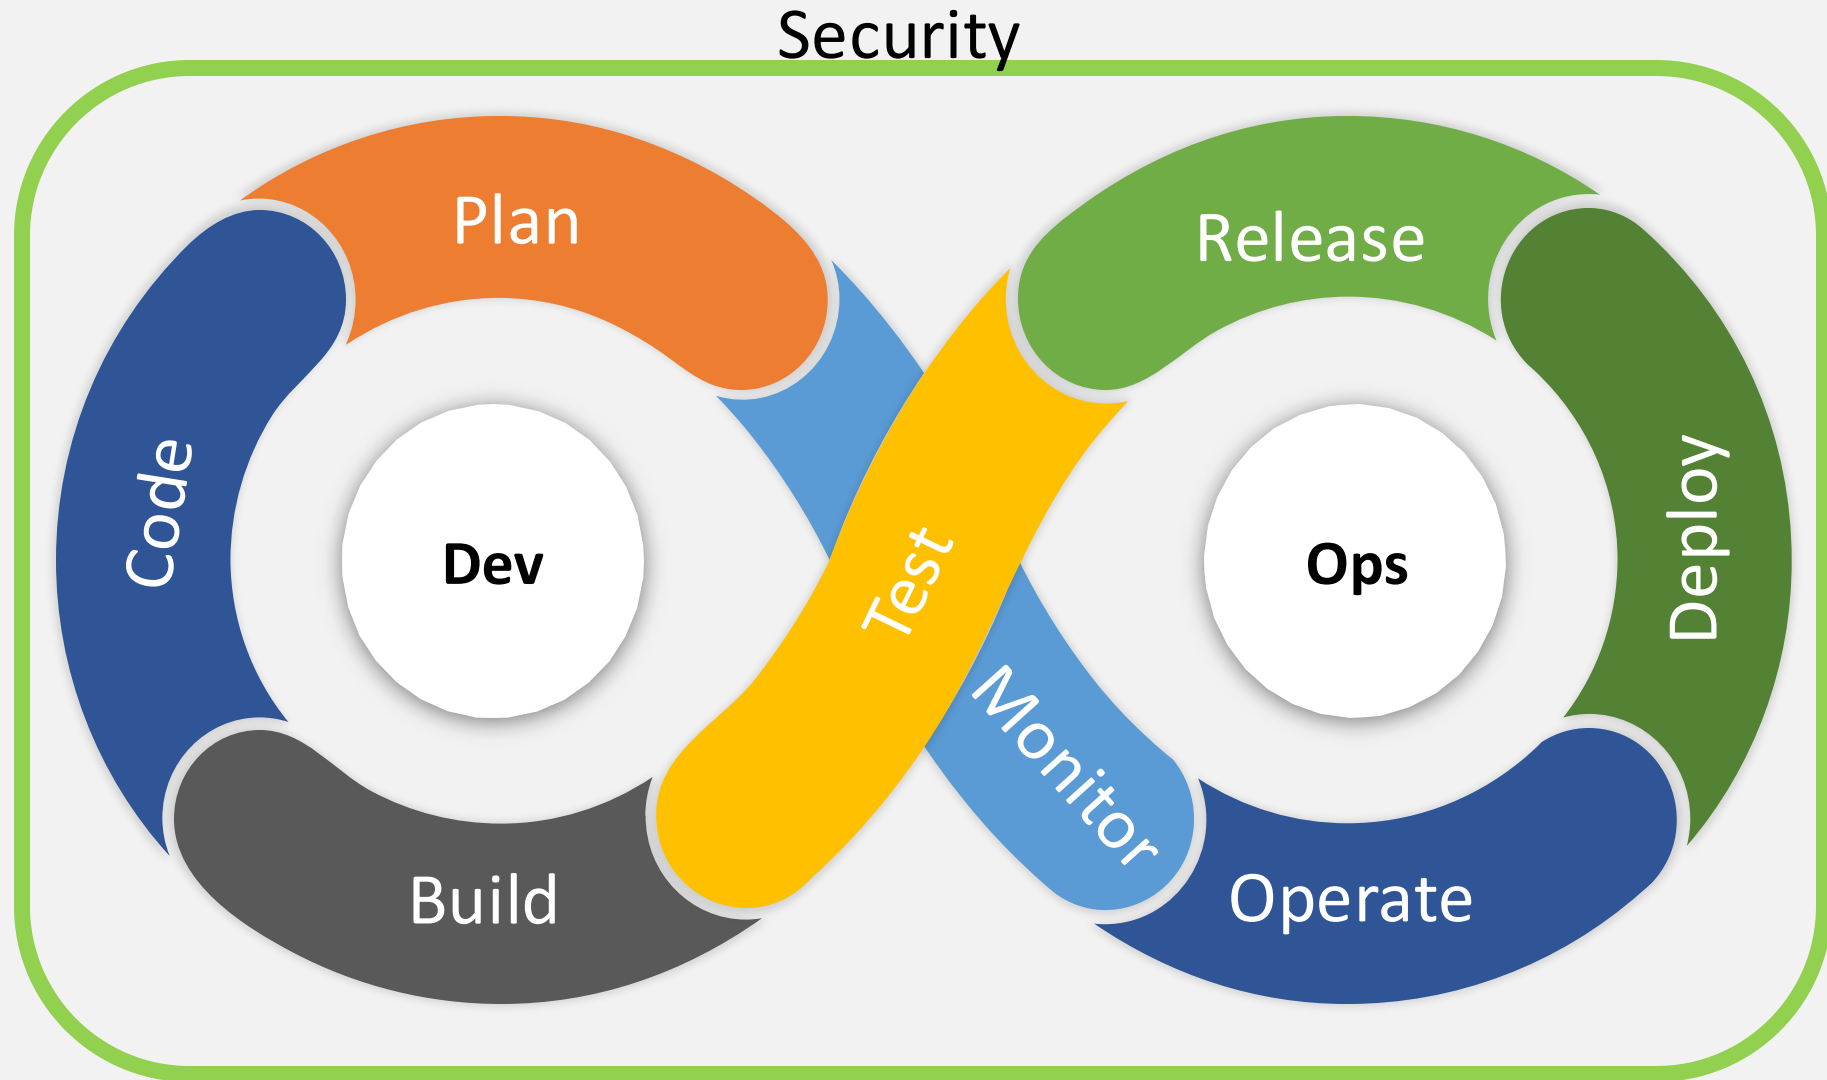

TIME

Innovation Trigger      Peak of Inflated Expectations      Trough of Disillusionment      Slope of Enlightenment      Plateau of Productivity

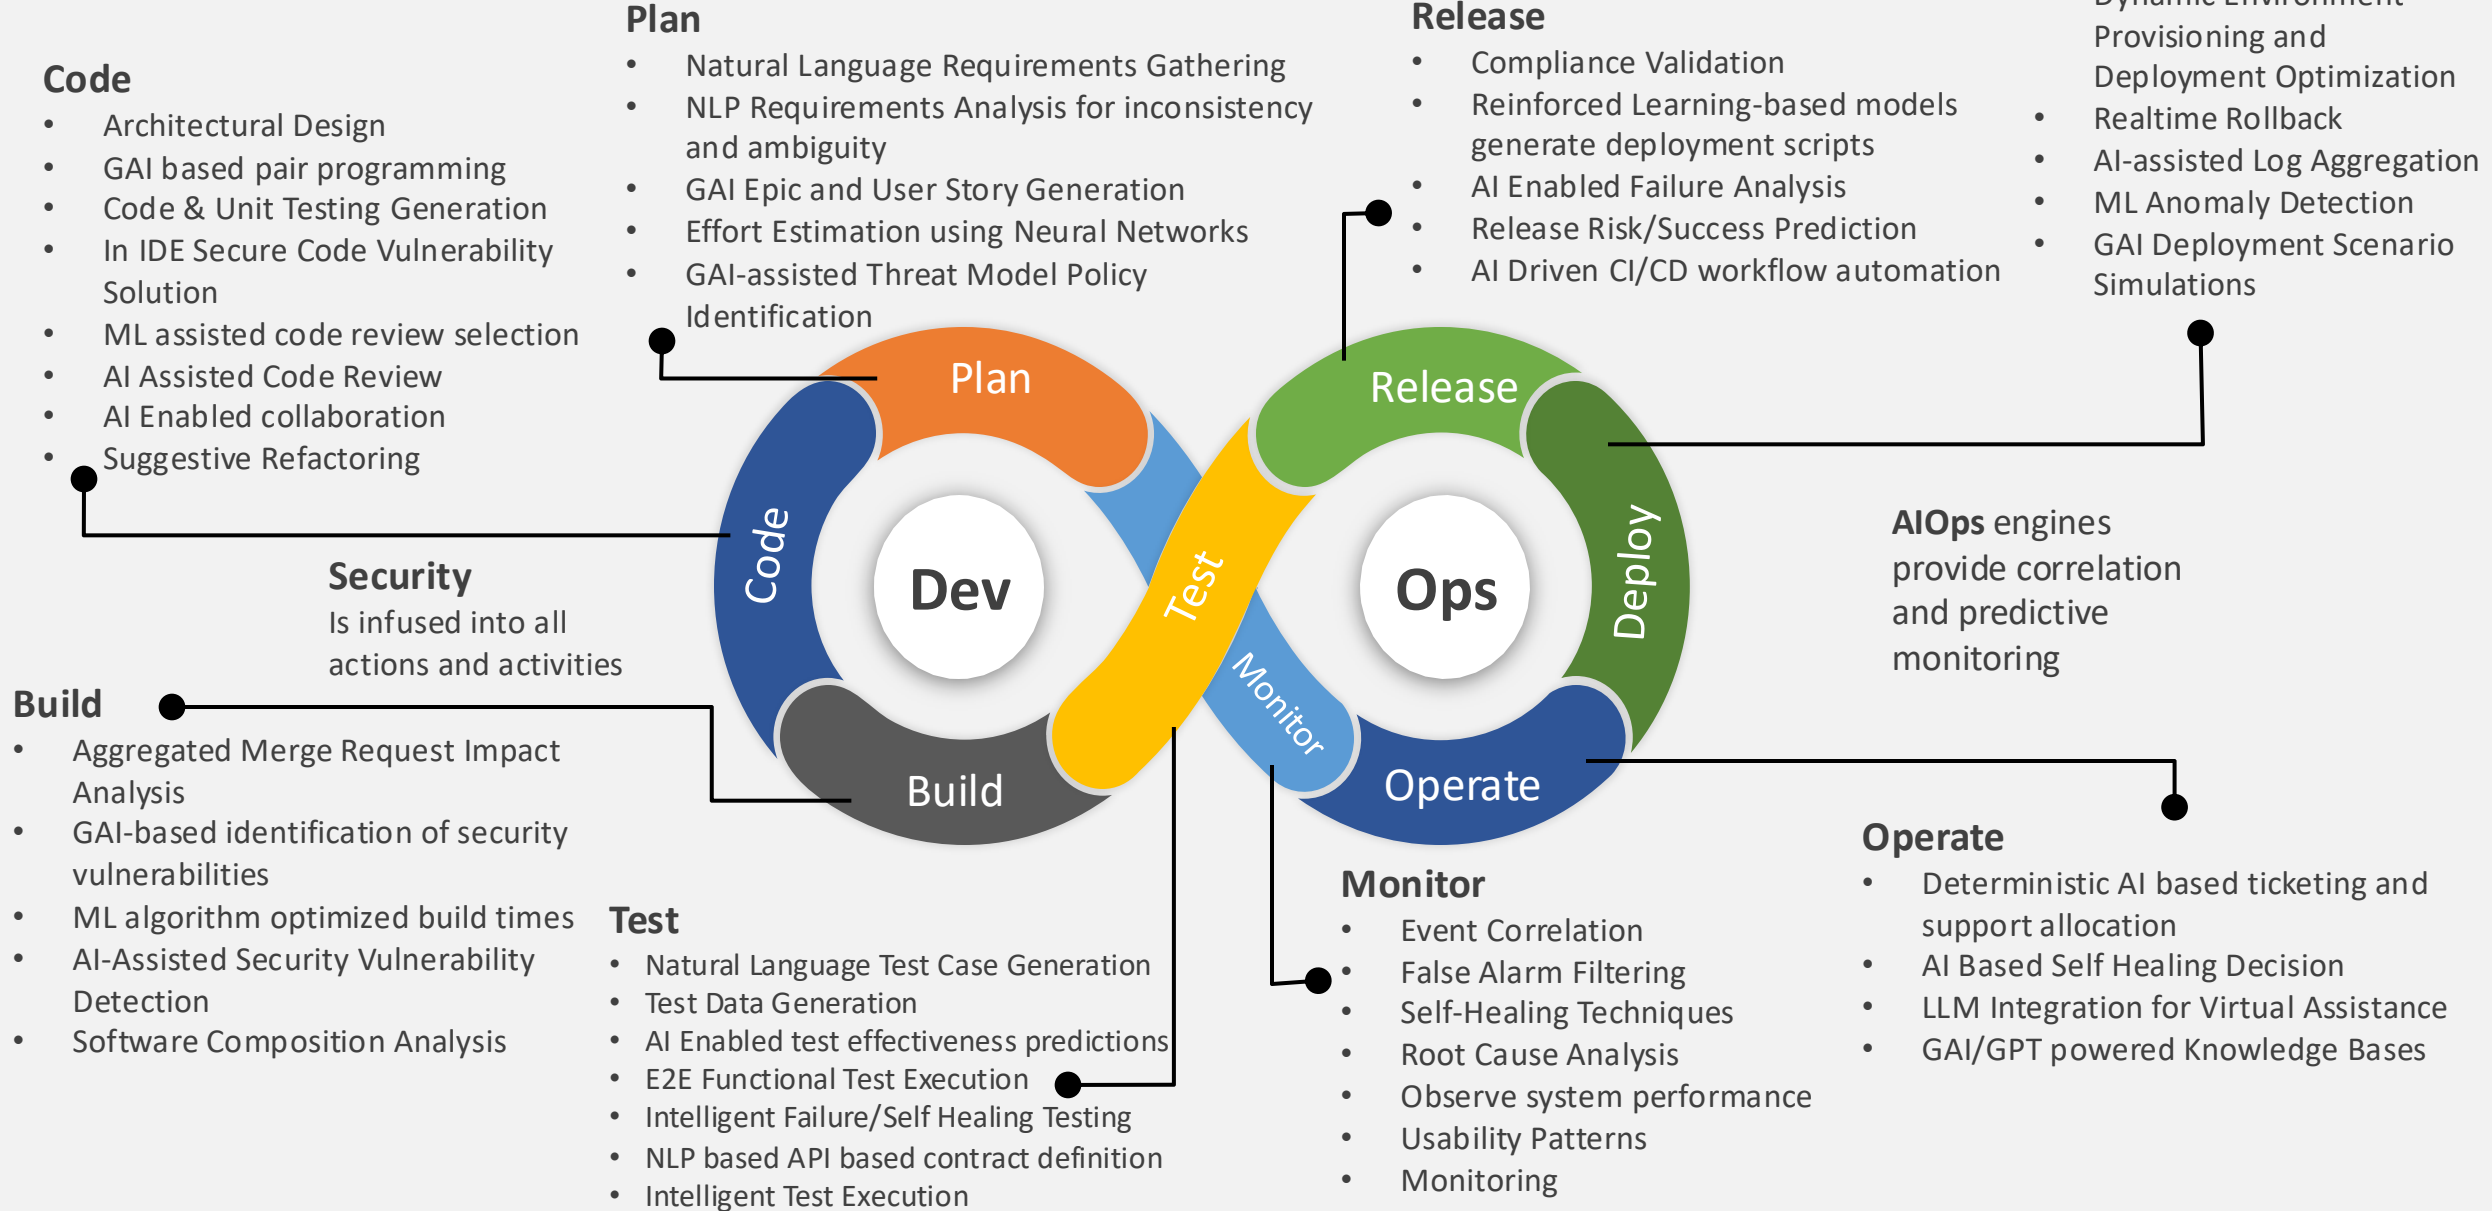

Plateau will be reached by: ○ 0 yrs   ● 0-5 yrs   ● 5-10 yrs   ▲ >10 yrs   ⓧ Obsolete before plateau

Model Interpretability Face recognition  
Convolutional Neural Networks (CNNs)  
**Search engines** Transfer Learning Explainable AI (XAI)  
Reinforcement Learning  
Computer Vision **Neural Networks** Deep Learning  
Deep Learning Bayesian Networks Speech to text  
Evolutionary Algorithms  
AI Governance Edge AI Semantic Analysis Probabilistic Reasoning  
Machine Learning **Autonomy** Federated Learning  
Swarm Intelligence **Generative AI** Connectionist AI  
Ensemble Learning Heuristic Search  
Agents Supervised Learning  
Unsupervised Learning Adversarial Machine Learning **Edge AI**

**Recurrent Neural Networks (RNNs)**  
Pattern Recognition **Feature Engineering**  
**AI Ethics** Knowledge Representation **Transfer Learning**  
Retrieval-Augmented Generation (RAG) Natural Language Processing (NLP) **WordItOut**

# Where can AI be used with DevSecOps?

# Infusing AI across the DevSecOps Continuum

# GAI Usage Patterns

## Content Generation

Complex auto-complete as well as new content creation is typically leveraged for generating test cases, code, documentation, and deployment scripts.

## Automated Reasoning

Analyzing patterns, suggesting alternatives about code quality, identifying security vulnerabilities, optimizing deployment strategies, and ensuring compliance with standards.

Treat GAI like a  
young  
apprentice...

Always pay  
close  
attention!!

Does  
Generative AI  
contradict  
DevSecOps  
principles?

# Where are people using GAI today?

- Searching for answers
- Documentation
- Requirements Analysis
- Debugging
- Code Completion
- Test Case Augmentation

# Unveiling the Human Side of AI in Software Engineering

Practice-wide survey to get to ground truth

**Human-Machine  
Collaboration**

**Trust Optimization**

**Skill Evolution &  
Team  
Communication**

**Personal Impact &  
Future Outlook**

Take the Survey

# Most challenging, time consuming, or painful tasks^

Challenge	%
Collaborating with cross-functional teams	50%
Managing technical debt	
Continuous integration/continuous deployment (CI/CD) pipeline setup	
Documentation (code, systems, APIs, etc.)	
Maintaining legacy code	
Maintaining security compliance	
[ ... ]	
Code reviews	
Writing New Code	3%

Take the Survey

**40+ different challenges have been identified so far!**

*^This data will be more insightful when correlated with role and experience*

**Are we addressing the pain points?**

AI-Augmented

# ^ Requirements Analysis

## Use Case:

- Requirements generation via text analysis
- Analyze user transcripts
- Include crowdsourced survey

## Considerations:

- Version control GPT prompts ++
- Diverse Datasets
- QA = rigorous testing + humans in the loop

AI-Augmented

# ^ Testing Use Cases

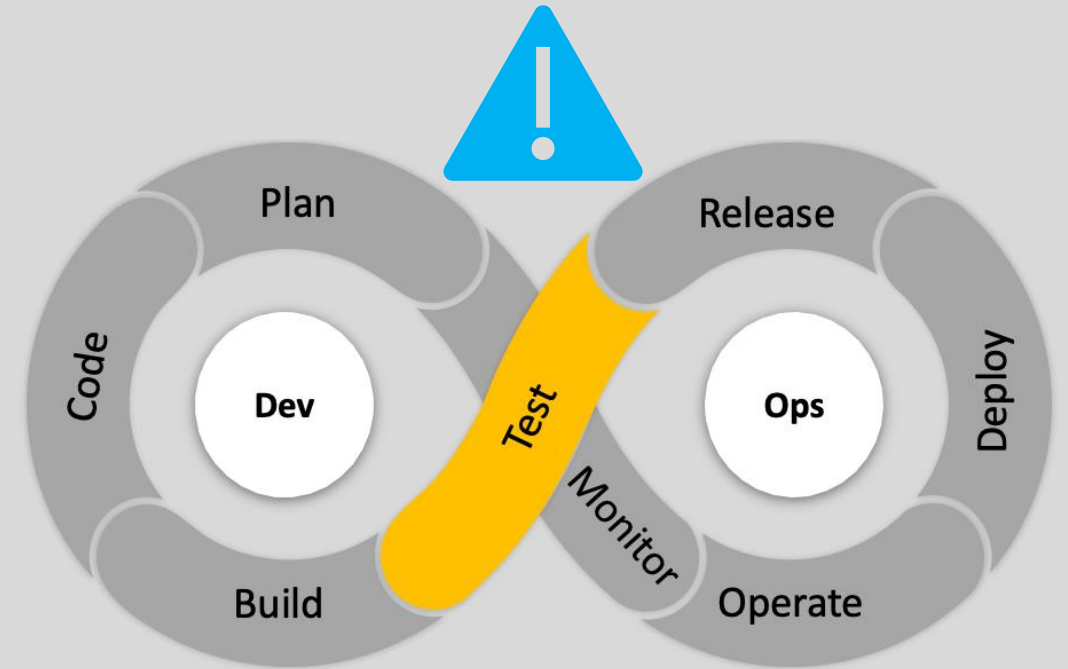

- Increase test coverage
- Brainstorming
- Synthetic Test Data Augmentation

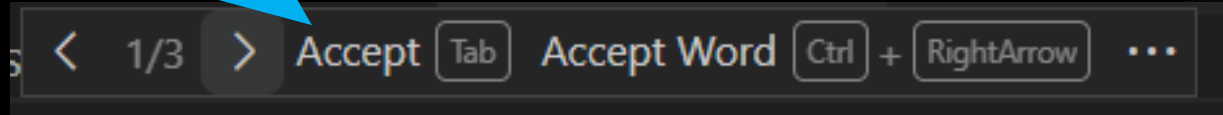

AI-Augmented

# ^ Testing Considerations

- Data Privacy & Integrity
- Beware of Irrelevant Tests
- Transparency and Explainability

# In IDE Help

```
def max_sum_slice(xs):  
    """Return the maximum sum of a slice of xs."""  
    max_sum = 0  
    for i in range(len(xs)):  
        for j in range(i, len(xs)):  
            this_sum = 0  
            for k in range(i, j + 1):  
                this_sum += xs[k]  
            if this_sum > max_sum:  
                max_sum = this_sum  
    return max_sum
```

# Don't generate code and tests

- Lack of Independent Verification
- Bias and Blind Spots
- Overfitting

GAI can be  
unreliable.

Pay close  
attention!

Is your organization prepared?

## Fix your SDLC first

- Address existing issues
- GAI can magnify existing problems

Gotchas to  
avoid

# Adaptation to New Workflows

- Measurements and metrics will waiver
- Training is a must
- Humans resist change

# What about productivity?

- Perceived productivity
- Team productivity \*not\*  
Individual productivity

# The Importance of Context

- AI requires a massive corpus of data
- If you subscribe to a service, you must provide context
- Are you okay with sharing?

Keep Humans in the Loop!

# Leading practices for today's AI- augmented SDLC

- Keep humans in the loop
- Everything in source control including prompts
- Secure your vulnerabilities
- Don't provide your private info/IP into public AI engines

Choose when and where to start

*AI-Augmented*

Designing Your <sup>^</sup> Software Engineering Tool Chain

Looking Ahead

# The Evolving Role of Digital Platforms

- Making it hard for humans to make mistakes
- Codify leading practices
- "Pro Code"
- The jumping off point for GAI-augmentation and future agentic capability

# What does the SDLC look like over the next few years?

## Code

- Architectural Design
- GAI based pair programming
- Code & Unit Testing Generation
- In IDE Secure Code Vulnerability Solution
- ML assisted code review selection
- AI Assisted Code Review
- AI Enabled collaboration
- Suggestive Refactoring

## Plan

- Natural Language Requirements Gathering
- NLP Requirements Analysis for inconsistency and ambiguity
- GAI Epic and User Story Generation
- Effort Estimation using Neural Networks
- GAI-assisted Threat Model Policy Identification

## Release

- Compliance Validation
- Reinforced Learning-based models generate deployment scripts
- AI Enabled Failure Analysis
- Release Risk/Success Prediction
- AI Driven CI/CD workflow automation

- Dynamic Environment Provisioning and Deployment Optimization
- Realtime Rollback
- AI-assisted Log Aggregation
- ML Anomaly Detection
- GAI Deployment Scenario Simulations

More data silos, slower flow, more quality issues...?

## Build

- Aggregated Merge Request Analysis
- GAI-based identification of security vulnerabilities
- ML algorithm optimized build times
- AI-Assisted Security Vulnerability Detection
- Software Composition Analysis

## Test

- Natural Language Test Case Generation
- Test Data Generation
- AI Enabled test effectiveness predictions
- E2E Functional Test Execution
- Intelligent Failure/Self Healing Testing
- NLP based API based contract definition
- Intelligent Test Execution

## Monitor

- Event Correlation
- False Alarm Filtering
- Self-Healing Techniques
- Root Cause Analysis
- Observe system performance
- Usability Patterns
- Monitoring

## Operate

- Deterministic AI based ticketing and support allocation
- AI Based Self Healing Decision
- LLM Integration for Virtual Assistance
- GAI/GPT powered Knowledge Bases

Jensen Huang  
CEO@ NVIDIA

But what about  
this...

Is the future of  
coding dead?

When will AI-  
engineers join the  
team?

Scott Wu  
CEO@ Cognition AI

# AI/Human Teaming

Who will we  
optimize for?  
Humans? AI  
Agents?

# We can't put the genie back in the bottle

- Prompt engineering as a discipline
- Ethics of prompts
- Who owns the generated outcomes
- Human-Machine teaming
- Software team performance
- Trust and reliability in software outcomes

# Call to Action – Your Next Steps

- Make Cybersecurity as your highest priority
- Enable research and discovery for GAI usage
- Establish on reasonable guardrails
- Ask your GAI providers about
  - model quality
  - security
  - roadmap

# What I need from you...

- How do you think the SDLC will change?
- How is your organization preparing?
- What are you personally focusing on?
- Share your organization's story and lessons learned
- Share out new use cases and new tools

What matters are the humans.
